

Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application.

Please amend claims 1-3 as indicated below (material to be inserted is in **bold and underline**, and material to be deleted is in strikeout or (if the deletion is of five or fewer consecutive characters or would be difficult to see) in double brackets ([]):

Listing of Claims

1. (currently amended) In a computer, a method of printing an image, comprising:
 - (a) selecting a set of data to be accessed in response to a generic access request;
 - (b) receiving content from an external device, the content executable by the computer to cause the computer to generate a generic access request to retrieve a set of data describing an image and further executable to use the retrieved set of data to generate a print job;
 - (c) executing the content so as to generate the generic access **request** requests;
 - (d) responding to the generic access **request** requests by retrieving the selected set of data; and
 - (e) executing the content so as to use the retrieved set of data to generate the print job.
2. (currently amended) A computer, comprising:
 - (a) means for selecting a set of data to be accessed in response to a generic access request;
 - (b) means for receiving content from an external device, the content executable by the computer to cause a computer to generate a generic access request to

Appl. No. 09/712,337
Attorney Docket no. 10007662-1
Response to Office Action dated 09/12/2005

(2)

retrieve a set of data describing an image and further executable to use the retrieved set of data to generate a print job;

(c) means for executing the content so as to generate the generic access request requests;

(d) means for responding to the generic access request requests by retrieving the selected set of data; and

(e) means for executing the content so as to use the retrieved set of data to generate the print job.

3. (currently amended) A program storage medium readable by a computer, tangibly embodying a program of instruction executable by the computer to perform method steps for printing a print job, the method steps comprising:

(a) selecting a set of data to be accessed in response to a generic access request;

(b) receiving content from an external device, the content executable by the computer to cause the computer to generate a generic access request to retrieve a set of data describing an image and further executable to use the retrieved set of data to generate a print job;

(c) executing the content so as to generate the generic access request requests;

(d) responding to the generic access request requests by retrieving the selected set of data; and

(e) executing the content so as to use the retrieved set of data to generate the print job.

4. (Previously presented) The method of claim 1,
wherein the computer is a client computer connected to the external device via a network; and
wherein the external device is a server computer.

5. (Previously presented) The method of claim 1, further comprising:

(f) transmitting the print job to a printer; and

wherein the printer is responsive to the print job by printing the image.

6. (Previously presented) The method of claim 1, further comprising:

(f) transmitting the print job to a printer; and

wherein the external device is the printer.

7. (previously presented) The method of claim 1, wherein the image is a multi-page document.

8. (previously presented) The method of claim 1, wherein the image is a single page document.

9. (previously presented) The method of claim 1, wherein step (e) is performed in response to user input.

10. (Previously presented) The computer of claim 2, further comprising:

(f) means for transmitting the print job to a printer.

11. (Previously presented) The program storage medium of claim 3, the method steps further comprising:

(f) transmitting the print job to a printer; and

wherein the printer is responsive to the print job by printing the image.

12. (Previously presented) The program storage medium of claim 3, wherein the selecting step is performed in response to user input.
